

Ideation Phase

Define the Problem Statements

Date	03 October 2026
Team ID	SWTID-2026-9943
Project Name	Implement Client Script and UI Policy (Incident)
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love, here applied to implementing Client Scripts and UI Policies on the ServiceNow Incident form.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers (administrators, developers and service desk agents), which helps you better understand how they perceive the Incident form.

I am	<i>Describe customer with 3-4 key characteristics - who are they?</i>	Describe the ServiceNow admin, developer or agent working on the Incident form
I'm trying to	<i>List their outcome or "job" the core about - what are they trying to achieve?</i>	List what they want to achieve with Client Scripts and UI Policies
but	<i>Describe what problems or barriers stand in the way - what bothers them most?</i>	Describe the data, validation or usability problems on the form that get in the way
because	<i>Enter the "root cause" of why the problem or barrier exists - what needs to be solved?</i>	Describe why the form lacks dynamic behavior (no UI Policy or Client Script)
which makes me feel	<i>Describe the emotions from the customer's point of view - how does it impact them emotionally?</i>	Describe the emotions that result from these problems or barriers

Example:

I am a ServiceNow admin	I'm trying to make Incident fields mandatory	But data is saved with missing details	Because the form has no UI Policy or Client Script	Which makes me feel Frustrated
--------------------------------	---	---	---	---------------------------------------

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A ServiceNow administrator who manages the Incident form	make key Incident fields mandatory, hidden or read-only based on category and state	users can save incidents with missing or incorrect data	no UI Policy or Client Script is applied to the form	Frustrated and worried about poor data quality
PS-2	A service desk agent who logs incidents all day	fill in the Incident form quickly and correctly	fields do not auto-fill or validate as I type	no onLoad or onChange Client Script is set up	Slowed down and unsure the data is right
