SCENARIO Creating, updating and resolving an incident using Client Scripts and UI Policies	 Entice How does someone initially become aware of this process?	 Enter What do people experience as they begin the process?	 Engage In the core moments in the process, what happens?	 Exit What do people typically experience as the process finishes?	 Extend What happens after the experience is over?
S Steps What does the person (or group) typically experience?	Receive an issue Open the Incident form Choose caller and category See the form adjust Spot mandatory fields	Fill in details Auto-fill runs Validate input Submit incident	Work the incident Update state and fields Resolve the incident	Fields lock down Notify the caller Check data quality	Incidents in reports Review policies Refine and test Roll out updates
I Interactions What interactions do they have at each step along the way? People: Who do they see or talk to? Places: Where are they? Things: What digital touchpoints or physical objects would they use?	Phone, email or the Service Portal Incident form in the ServiceNow UI (Next Experience or Classic) Caller and Category fields on the form UI Policy runs in the browser as values change Red asterisk on mandatory fields	Short description, Impact and Urgency fields onChange Client Script and g_form.setValue Inline error and info messages Submit button and onSubmit script	State, Work notes and Assignment group fields UI Policy conditions based on State Resolution code and Close notes fields	Read-only fields on closed incidents Notification email to the caller Incident form summary view	Reports and dashboards Client Scripts and UI Policies lists Sub-production instance and Update Sets Update Set and production instance
G Goals & motivations At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...")	Help me log the issue quickly Help me find the right form fast Help me avoid picking the wrong category Help me see only what I need Help me know what is required	Help me capture the issue accurately Help me avoid retyping information Help me fix mistakes before saving Help me be sure it saved correctly	Help me move the incident forward Help me know what I can still edit Help me resolve with the right details	Help me keep closed records safe Help me confirm the caller is informed Help me leave a complete record	Help me trust the numbers Help me see what is working Help me change rules safely Help me roll out with no downtime
P Positive moments What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?	Familiar, consistent layout Caller lookup is quick The form feels clean and relevant Required fields are clearly marked	Caller auto-complete saves typing Priority is set automatically Errors are caught before submit The incident number appears at once	Assignment group list is filtered Clear editable and read-only fields Resolution fields appear only when needed	Records stay consistent Automatic, consistent emails Complete records are easy to report on	Reports are accurate Active policies are easy to list Testing prevents live issues Changes move together in one set
N Negative moments What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?	Too many fields shown at once Agents sometimes skip the category Hidden fields can confuse new agents Rules differ by category	Short descriptions are often vague Auto-fill can overwrite values by mistake Error messages can be unclear A blocked save with no explanation	Fields change after state updates Read-only fields surprise agents Close notes forgotten before resolving	Hard to fix a typo after closing Callers reply to closed incidents Missing details are found later	Old incidents have blank fields Overlapping policies are hard to trace Testing takes extra time A missed dependency breaks the form
A Areas of opportunity How might we make each step better? What ideas do we have? What have others suggested?	Could we link new emails straight to an incident? Show only the fields that apply with a UI Policy Make Category mandatory with a UI Policy Add an info message when a field appears Review which fields are mandatory per state	Warn if the short description is too short Only fill fields that are empty Write clear, specific error messages Show which field blocked the save	Filter assignment group by category Explain why a field is read-only Make Close notes mandatory on Resolved	Allow admin edits with a role check Add a reopen link to the email Add a final completeness check on submit	Run a clean-up on old records Document each policy and script Create a test checklist for form changes Check Update Set contents before promoting

Incident form: Client Script & UI Policy

Stage 1 of 5

How does someone initially become aware of this process?

S Steps What does the person (or group) typically experience?	Receive an issue A caller reports an issue by phone, email or the Service Portal	Open the Incident form The agent opens a new incident from the Service Desk menu	Choose caller and category The agent picks the caller and a category for the issue	See the form adjust UI Policy shows or hides fields based on the category	Spot mandatory fields Required fields are marked so the agent knows what to fill
I Interactions What interactions do they have at each step along the way?	Phone, email or the Service Portal	Incident form in the ServiceNow UI (Next Experience or Classic)	Caller and Category fields on the form The caller record holds location and phone	UI Policy runs in the browser as values change	Red asterisk on mandatory fields
G Goals & motivations At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...")	Help me log the issue quickly	Help me find the right form fast	Help me avoid picking the wrong category	Help me see only what I need	Help me know what is required
P Positive moments What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?		Familiar, consistent layout	Caller lookup is quick	The form feels clean and relevant	Required fields are clearly marked
N Negative moments What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?		Too many fields shown at once	Agents sometimes skip the category	Hidden fields can confuse new agents	Rules differ by category
A Areas of opportunity How might we make each step better? What ideas do we have? What have others suggested?	Could we link new emails straight to an incident?	Show only the fields that apply with a UI Policy	Make Category mandatory with a UI Policy	Add an info message when a field appears	Review which fields are mandatory per state

Stage 2 of 5

What do people experience as they begin the process?

Service Desk Agent

SA

ServiceNow Admin

AD

ITSM Developer

DV

Process Owner

PO

End User

EU

S Steps What does the person (or group) typically experience?	Fill in details The agent types a short description, impact and urgency	Auto-fill runs onChange scripts fill caller details and calculate priority	Validate input Scripts check phone, email and required data as the agent types	Submit incident The onSubmit script runs final checks, then the record is saved
I Interactions What interactions do they have at each step along the way?	Short description, Impact and Urgency fields Description text area	onChange Client Script and g_form.setValue	Inline error and info messages	Submit button and onSubmit script
G Goals & motivations At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...")	Help me capture the issue accurately	Help me avoid retyping information	Help me fix mistakes before saving	Help me be sure it saved correctly
P Positive moments What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?	Caller auto-complete saves typing	Priority is set automatically	Errors are caught before submit	The incident number appears at once
N Negative moments What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?	Short descriptions are often vague	Auto-fill can overwrite values by mistake	Error messages can be unclear	A blocked save with no explanation
A Areas of opportunity How might we make each step better? What ideas do we have? What have others suggested?	Warn if the short description is too short	Only fill fields that are empty	Write clear, specific error messages	Show which field blocked the save

Incident form: Client Script & UI Policy

Stage 3 of 5

In the core moments in the process, what happens?

Service Desk
Agent

Process
Owner

PO

End
User

EU

S

Steps

What does the person (or group) typically experience?

Work the incident
The agent updates state, notes and assignment group

Update state and fields
UI Policy changes which fields are editable as the state changes

Resolve the incident
The agent adds resolution details and sets the state to Resolved

I

Interactions

What interactions do they have at each step along the way?

State, Work notes and Assignment group fields

Colleagues may reassign or comment

UI Policy conditions based on State

Resolution code and Close notes fields

G

Goals & motivations

At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...")

Help me move the incident forward

Help me know what I can still edit

Help me resolve with the right details

P

Positive moments

What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?

Assignment group list is filtered

Clear editable and read-only fields

Resolution fields appear only when needed

N

Negative moments

What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?

Fields change after state updates

Read-only fields surprise agents

Close notes forgotten before resolving

A

Areas of opportunity

How might we make each step better? What ideas do we have? What have others suggested?

Filter assignment group by category

Explain why a field is read-only

Make Close notes mandatory on Resolved

Incident form: Client Script & UI Policy

Stage 4 of 5

What do people typically experience as the process finishes?

User

EU

S

Steps

What does the person (or group) typically experience?

Fields lock down
Closed incidents become read-only for most fields

Notify the caller
The caller gets an email that the incident is resolved

Check data quality
The agent reviews the record before closing

I

Interactions

What interactions do they have at each step along the way?

Read-only fields on closed incidents

Notification email to the caller

Incident form summary view

G

Goals & motivations

At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...")

Help me keep closed records safe

Help me confirm the caller is informed

Help me leave a complete record

P

Positive moments

What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?

Records stay consistent

Automatic, consistent emails

Complete records are easy to report on

N

Negative moments

What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?

Hard to fix a typo after closing

Callers reply to closed incidents

Missing details are found later

A

Areas of opportunity

How might we make each step better? What ideas do we have? What have others suggested?

Allow admin edits with a role check

Add a reopen link to the email

Add a final completeness check on submit

S Steps What does the person (or group) typically experience?	Incidents in reports Complete data appears in dashboards and reports	Review policies The admin reviews how UI Policies and scripts perform	Refine and test The admin improves rules and tests them in sub-production	Roll out updates Changes are promoted to production with an Update Set
I Interactions What interactions do they have at each step along the way?	Reports and dashboards	Client Scripts and UI Policies lists	Sub-production instance and Update Sets	Update Set and production instance
G Goals & motivations At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...")	Help me trust the numbers	Help me see what is working	Help me change rules safely	Help me roll out with no downtime
P Positive moments What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?	Reports are accurate	Active policies are easy to list	Testing prevents live issues	Changes move together in one set
N Negative moments What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?	Old incidents have blank fields	Overlapping policies are hard to trace	Testing takes extra time	A missed dependency breaks the form
A Areas of opportunity How might we make each step better? What ideas do we have? What have others suggested?	Run a clean-up on old records	Document each policy and script	Create a test checklist for form changes	Check Update Set contents before promoting
