

Project Design Phase-II Data Flow Diagram & User Stories

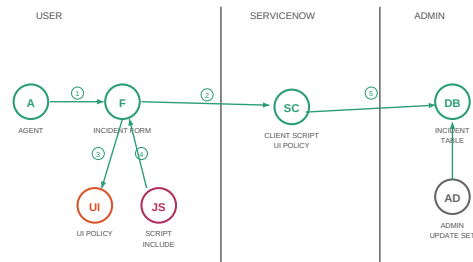

Date	03 October 2026
Team ID	SWTID-2026-9943
Project Name	Implement Client Script and UI Policy (Incident)
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored. Here it shows how data moves when an agent works on the ServiceNow Incident form with Client Scripts and UI Policies.

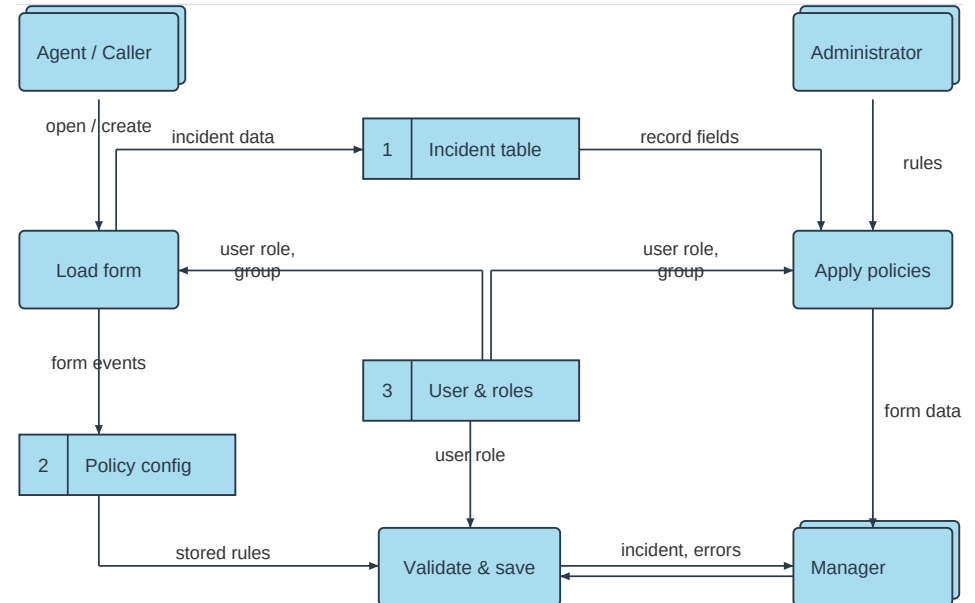

Example: (Simplified)

Flow

1. Agent opens or creates an Incident on the ServiceNow instance.
2. UI Policy shows, hides or makes fields mandatory based on conditions.
3. Client Script (onLoad / onChange) auto-fills values and validates input.
4. On submit, the onSubmit script validates the data and the record is saved to the Incident table.
5. Admin reviews and updates policies and scripts using Update Sets.

Example: DFD Level 0 (Industry Standard)

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Service Desk Agent (Incident user)	Mandatory Fields	USN-1	As an agent, I can see required fields marked as mandatory when I create an incident, so I do not miss key information.	Mandatory fields show an asterisk and the form cannot be saved until they are filled	High	Sprint-1
		USN-2	As an agent, I will see fields appear or hide based on the category and state I choose.	Fields show or hide immediately when the category changes	High	Sprint-1
		USN-3	As an agent, I will see fields become read-only once an incident is closed.	Closed incident fields cannot be edited	Medium	Sprint-2
	Validation	USN-4	As an agent, I will get a clear error message if I enter an invalid phone number or email.	Invalid input is blocked with a clear message	Medium	Sprint-1
	Auto-population	USN-5	As an agent, I want caller details to fill in automatically when I select a caller.	Location, phone and email are populated	High	Sprint-1
		USN-6	As an agent, I want priority to calculate from impact and urgency.	Priority updates when impact or urgency changes	Medium	Sprint-2
Customer (Service Portal user)	Portal Incident Form	USN-7	As a user, I can submit an incident from the Service Portal and be told what is missing.	Required fields are enforced in the portal	Medium	Sprint-2
Service Desk Manager	Data Quality	USN-8	As a manager, I want incident reports to show complete data.	Reports show no missing mandatory fields	Low	Sprint-3
Administrator	Policy Management	USN-9	As an administrator, I can create and edit UI Policies and Client Scripts and move them with an Update Set.	Changes are captured in an Update Set and promoted to production	High	Sprint-2
