

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	03 October 2026
Team ID	SWTID-2026-9943
Project Name	Implement Client Script and UI Policy (Incident)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Incident Form Field Control (UI Policy)	Make fields mandatory based on state and category Show / hide fields based on conditions Make fields read-only after resolve / close
FR-2	Client-Side Validation (Client Script)	onSubmit validation of required data onChange validation of field values (phone, email) Display error and info messages
FR-3	Auto-population and Defaults	onLoad default values Auto-fill caller details on selection Set priority from impact and urgency
FR-4	Testing and Deployment	Test in a sub-production instance Capture changes in an Update Set Document scripts and policies

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Incident form is simple: fields appear only when relevant and error messages are clear
NFR-2	Security	Client-side checks are backed by server-side validation (Business Rules, ACLs); no sensitive data in scripts
NFR-3	Reliability	Scripts handle empty values without breaking the form and behave the same in every form view
NFR-4	Performance	Use UI Policies where possible and avoid synchronous server calls so the form loads quickly
NFR-5	Availability	Works in the standard UI, Service Portal and mobile; deployed by Update Set with no downtime
NFR-6	Scalability	Reusable policies and Script Includes that extend to other tables as incident volume grows
