

Project Design Phase-II Technology Stack (Architecture & Stack)

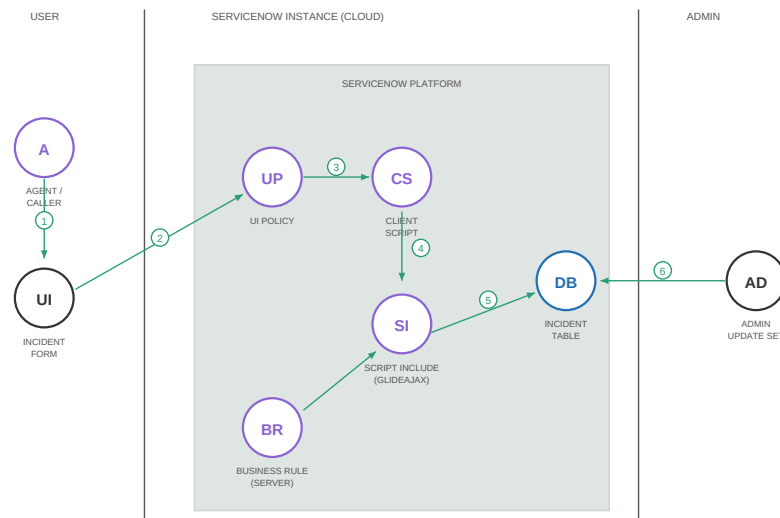

Date	03 October 2026
Team ID	SWTID-2026-9943
Project Name	Implement Client Script and UI Policy (Incident)
Maximum Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Example: Implement Client Script and UI Policy on the ServiceNow Incident form

Reference: <https://developer.servicenow.com/>

Guidelines:

- Include all the processes (As an application logic / Technology Block)
- Provide infrastructural demarcation (Local / Cloud)
- Indicate external interfaces (third party API's etc.)
- Indicate Data Storage components / services
- Indicate interface to machine learning models (if applicable)

Table-1 and Table-2 are on the next page.

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	How the user interacts with the application, e.g. Incident form in the platform UI or Service Portal	ServiceNow Platform UI (Next Experience / Classic), Service Portal
2.	Application Logic-1	UI Policy: show / hide, mandatory and read-only fields based on conditions	UI Policy (conditions and UI Policy actions)
3.	Application Logic-2	Client Script: validate input and react to field changes	JavaScript (onLoad, onChange, onSubmit)
4.	Application Logic-3	Auto-population, default values and messages on the form	g_form and g_user client APIs
5.	Database	Incident record data and field configuration	ServiceNow Incident table (extends Task)
6.	Cloud Database	Database service on cloud	ServiceNow instance database (cloud hosted)
7.	File Storage	Attachments added to incidents	ServiceNow Attachments (sys_attachment)
8.	External API-1	Fetch caller or CMDB data for the form without a page reload	GlideAjax with Script Include
9.	External API-2	Optional notification or integration with another tool	REST API / Integration Hub
10.	Machine Learning Model	Optional prediction of category and assignment group	ServiceNow Predictive Intelligence
11.	Infrastructure (Server / Cloud)	Application deployment on Cloud Local Server Configuration: Not applicable Cloud Server Configuration: ServiceNow instance (PDI)	ServiceNow Cloud, Update Sets for moving changes

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	Open-source frameworks used: none; the solution uses ServiceNow platform JavaScript APIs	ServiceNow client-side APIs (g_form, g_user, GlideAjax)
2.	Security Implementations	Access controls and server-side checks back up client-side logic	ACLs, Roles, Business Rules, HTTPS
3.	Scalable Architecture	Configuration-based, reusable policies and Script Includes scale to other tables	Cloud platform, reusable UI Policies and Script Includes

S.No	Characteristics	Description	Technology
4.	Availability	Hosted on ServiceNow cloud data centers with high availability	ServiceNow cloud (HA)
5.	Performance	Prefer UI Policies over scripts, use asynchronous GlideAjax, keep onChange logic small	UI Policy, GlideAjax, client-side caching
