

Project Design Phase Problem – Solution Fit Template

Date	03 October 2026
Team ID	SWTID-2026-9943
Project Name	Implement Client Script and UI Policy (Incident)
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. Here, the problem is incomplete and inconsistent data on the ServiceNow Incident form, and the solution is to use Client Scripts and UI Policies to guide users and validate input in real time.

Purpose:

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior (the Incident form, Service Portal).
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- Understand the existing situation in order to improve it for your target group.

Template:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS Who is your customer? i.e. service desk agents who log incidents in ServiceNow, ITIL fulfillers, end users on the Service Portal	6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices of solutions? i.e. limited scripting skills, form load time, no admin access, mobile / portal limits.	5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. manual checks vs. Data Policy.	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides. i.e. enforce mandatory fields, show / hide fields, validate input.	9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. the incident form has no client-side rules, so bad data is only found after save.	7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? i.e. directly related: open an incident, choose category, set impact and urgency; indirectly associated: call the user back for missing details.	
Identify strong TR & EM	3. TRIGGERS TR What triggers customers to act? i.e. an incident bounced back for missing info, an SLA breach warning, an audit finding.	10. YOUR SOLUTION SL If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.	8. CHANNELS of BEHAVIOUR CH 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER EM How do customers feel when they face a problem or a job and afterwards? i.e. confused, frustrated > confident, in control - use it in your communication strategy & design.		8.2 OFFLINE CH What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.
