

Project Planning Phase

Implement Client Script & UI Policy (Incident) - ServiceNow Developer

Project Name: Incident Form Automation using Client Scripts & UI Policies (ServiceNow)

Team ID: _____ Maximum Marks: 5

1. Product Backlog, Sprint Schedule and Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Environment Setup	USN-1	As a developer, I can set up a ServiceNow PDI and create a dedicated Update Set to capture all changes.	2	High	
Sprint-1	Requirement Analysis	USN-2	As a developer, I can analyze the Incident form and document which fields need dynamic behavior.	3	High	
Sprint-1	UI Policy	USN-3	As a service desk user, I must fill in Short description and Category before saving an incident (mandatory UI Policy).	3	High	
Sprint-1	UI Policy	USN-4	As an agent, when State = On Hold, the On hold reason field becomes visible and mandatory.	3	High	
Sprint-1	UI Policy	USN-5	As an agent, when State = In Progress, Assignment group becomes mandatory.	3	High	
Sprint-1	UI Policy	USN-6	As an admin, when State = Closed, key fields (Caller, Category) become read-only.	3	Medium	
Sprint-1	UI Policy	USN-7	As a developer, I can use UI Policy scripts ("Execute if true / false") for conditions the UI Policy Actions cannot handle.	3	Medium	
Sprint-2	Client Script (onLoad)	USN-8	As an agent, when a new incident form loads, default values are set and a guidance message is shown.	3	High	
Sprint-2	Client Script (onChange)	USN-9	As an agent, when Category changes, Subcategory is cleared and a message prompts me to reselect it.	3	High	
Sprint-2	Client Script (onChange)	USN-10	As an agent, when Impact and Urgency are both High, a warning shows that this is a Priority 1 incident.	3	High	
Sprint-2	Client Script (onSubmit)	USN-11	As a manager, an incident cannot be submitted if the Short description is under 10 characters.	3	High	
Sprint-2	Client Script (onChange)	USN-12	As an agent, when I select a Caller, their VIP status and department are shown via g_form.getReference.	5	Medium	
Sprint-2	Client Script (onCellEdit)	USN-13	As an agent, editing State inline in the list view is validated by an onCellEdit script.	3	Low	

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-3	Client Script (GlideAjax)	USN-14	As an agent, selecting a Caller auto-populates their location/department via a GlideAjax call.	5	High	
Sprint-3	Script Include	USN-15	As a developer, I can create a client-callable Script Include to serve data to GlideAjax.	3	High	
Sprint-3	Client Script	USN-16	As a user, I see field messages (showFieldMsg) and error/info banners for invalid input.	2	Medium	
Sprint-3	Conflict Testing	USN-17	As a developer, I can verify UI Policies and Client Scripts don't conflict (execution order).	3	Medium	
Sprint-3	Testing	USN-18	As a tester, I can run test cases for each script and policy and record results.	5	High	
Sprint-3	Compatibility	USN-19	As a user, the UI Policies work in the Service Portal (UI Type: All).	2	Low	
Sprint-4	Role Testing	USN-20	As a tester, I can verify behavior with different roles (admin, itil, caller).	5	High	
Sprint-4	Bug Fixing	USN-21	As a developer, I can fix defects and refine scripts based on test results.	5	High	
Sprint-4	Deployment	USN-22	As an admin, I can commit the Update Set and move it to the target instance.	3	High	
Sprint-4	Documentation	USN-23	As a stakeholder, I get technical documentation and a user guide.	4	Medium	
Sprint-4	Demo	USN-24	As a stakeholder, I can see a demo with screenshots and a final project report.	3	Medium	

Total story points: 80 (4 sprints x 20 points)

2. Project Tracker and Velocity

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022		
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022		
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022		

Velocity

Total story points = 80 over 4 sprints, so team velocity = 20 story points per sprint.

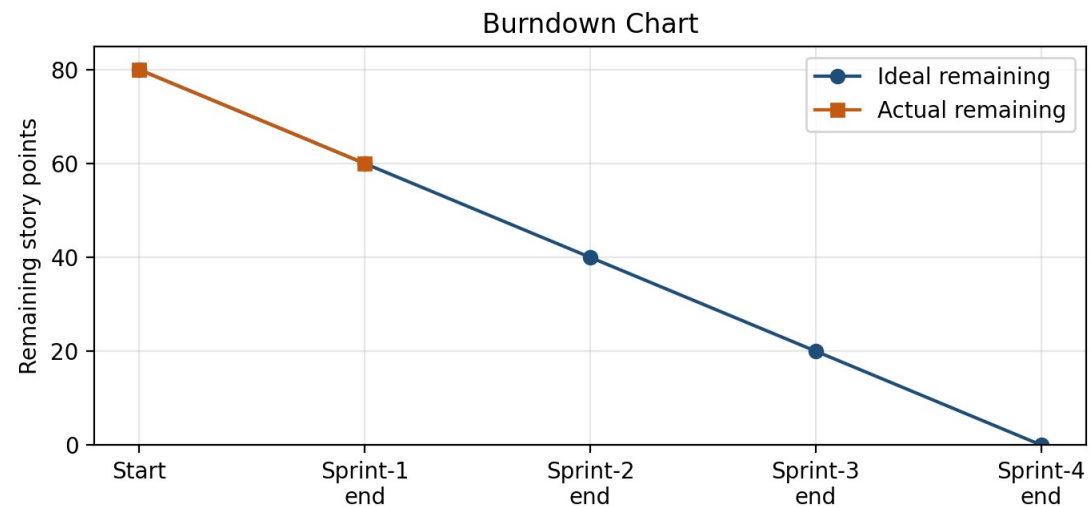

Sprint duration = 6 days.

Average velocity (AV) = velocity / sprint duration = 20 / 6 = 3.33 story points per day.

Note: the template writes the formula as sprint duration / velocity (20/10 = 2). Story points per day is velocity / duration; the template's example gives 2 either way.

3. Burndown Chart

Point in Time	Ideal Remaining	Actual Remaining
Start (24 Oct)	80	80
End of Sprint-1 (29 Oct)	60	60
End of Sprint-2 (05 Nov)	40	
End of Sprint-3 (12 Nov)	20	
End of Sprint-4 (19 Nov)	0	

Actual remaining is shown for Sprint-1 only; add the later sprints as they close.
